Document Validation Report

for ReDKG

Correspondence: No
Percentages: 40.0%

Conclusion:

The repository provides a complete static KGE pipeline (TransE training loop, negative sampling, DataLoader setup, evaluation metrics MRR/Hits) matching the documentation's KGE example, but lacks the described dynamic-graph encoding and deep RL decision-support components. Key elements for temporal graph handling and reinforcement learning on low-dimensional KG representations are not implemented, preventing full reproducibility of the documented system.
